

Hi All

You may have started an institutional repository or not. Now you need to store other digital items that are not directly related to research, for example, past exam papers or open textbooks etc..

The University of Namibia and Stellenbosch University have started digital libraries using DSpace. Click on the following links to view:

- <http://digital.unam.na>
- <http://digital.lib.sun.ac.za>

It is also very useful to have a development/testing/training repository available. It is not a good idea to do training or development/testing on a live production system.

To build a digital collections repository or testing/training repository go to: <http://bit.ly/goodir> and <http://bit.ly/garpir>.

You can also download a wiki based guide from the following links:

- <http://hdl.handle.net/10019.1/79321>
- <http://hdl.handle.net/11105/158>

The PDF guides above were created from the wiki help guides using the PediaPress extension for Mediawiki. However I am having problems creating the latest versions of the guide because the latest version PediaPress does not work with latest version of Mediawiki. When it does then I will update the PDF versions.

Have Fun!
